Subject: Application for Junior IT support officer

Dear Hiring Manager,

I'm delighted to be applying for the position of Junior IT support officer . I believe that with my effective and well-honed analytical and troubleshooting skills, I can add value to your infrastructure by smoothing along all of the communications between your company's networked devices. Given how many important company activities take place across computer networks these days, I understand that this is a position that carries great responsibility with it. However, with my diligence, problem-solving skills and openness to learning from all those with whom I work, I believe that I would be an asset to Buna bank sc.

I earned my Bachelor of Science in Computer Science and information technology from Addis Ababa Science and technology University. To further improve my skills in the area of computer networking, IT technical support , I passed the certification exams for level 4 coc, google IT support, Cisco's CCNA and CCNP routing and switching program, which required me to set up a network of my own, configure a wide host of devices for it, ensure that all routers were functioning properly and then resolve a wide array of actual issues that would be inflicted upon the network.

I thank you for your time and consideration in examining my qualifications for this position. I am very much look forward to continuing to the next stage of the hiring process.

Sincerely,

Solomon Azene
